

**ABOUT US**

**Company Background.** Melissinos Trading was founded in 2011 by Michael Melissinos with \$300,000 in assets. Today, the firm manages \$10 million for individuals, entrepreneurs, local business owners and family offices. Its main office is in Beach Haven, NJ and is registered in the U.S. by the CFTC as a Commodity Trading Advisor and Commodity Pool Operator. Its registered with the SEC under a Reg-D exemption.

**Investment Strategy.** We intend to produce market-beating returns while exhibiting low correlation to both traditional asset-classes and alternatives. Eupatrid Global Trends (EGT) attempts to capitalize on long-term trends both up and down within major asset classes – equities, fixed income, commodities, currencies and crypto futures. It monitors a vast portfolio of +150 instruments. Market conditions influence how much risk EGT takes. In general, it takes more risk in markets favoring trends and less in those that do not; monitoring market conditions (trend strength, correlation, volatility & sentiment) and adjusting risk exposure accordingly.

**DECEMBER PERFORMANCE REVIEW**

We finished our 14th year on a strong note thanks to profitable trends in cocoa and various currency markets. What a volatile year it was for our trading strategy – from +25% in Q1 to -5% at the end of October to finishing +9.4% to end the year. For a year where there wasn't an abundance of trends, I grade this year as a success.

**Equities:** Despite losing money in equities overall, we made some money in PLTR and TSLA. We trimmed some of our long exposure in foreign indices such as Australia and South Africa. **Currencies:** We made good money from riding downtrends in many names, especially the Indian Rupee and Korean Won. We added to short positions in the Aussie and Singapore Dollar. We currently hold a large long position in the U.S. Dollar against many currencies. **Fixed Income:** We trimmed a couple of long positions in the Euro Bund and JGB this month, but we made a little bit of money due to our overall net short position. **Commodities:** Softs and Metals were our profitable sectors while energies and grains lost us money. It remains a head-scratching environment for commodities as there is not a clear-cut direction on the asset class overall. Some are going up and some are going down. This makes the broad-sweeping inflation argument tough to explain.

**DISCLOSURES**

**FUTURES TRADING INVOLVES A SUBSTANTIAL RISK OF LOSS. PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS.**

E Represents estimated not actual performance. No trading (or fees taken) occurred between November-December 2011 as Melissinos Trading transitioned to a commodity pool structure. Indexes used in Monthly Net Returns section: An investor cannot directly invest in an index. An index does not reflect fees that may be charged to an investment vehicle that is based on the index. Data is obtained from what Melissinos Trading holds to be reliable sources. Benchmarks are the SocGen CTA Index and the HFRX Hedge Fund Index.

Eupatrid Global Trends trades virtual currency derivatives, specifically CME Bitcoin and CME Ether which may experience significant price volatility and the initial margin for these products may be set as a percentage of the value of a particular contract. Margin requirements for long and short positions can increase if the price of the contract rises or falls. Some futures commission merchants, such as the ones Melissinos Trading uses to trade these products may pose restrictions on customer trading activity in these products, such as requiring additional margin, imposing position limits, prohibiting naked shorting or give-in transactions. The rules of certain designated contract markets impose trading halts that may restrict our ability to exit a position during a period of high volatility.

This information is produced by Melissinos Trading, LLC (the "Advisor"). For all of 2011, the Advisor's performance reflects the composite performance of all accounts advised. Performance includes actively managed accounts with speculative trading profits as the objective. Performance does not reflect the performance of any one account, but rather a combination of the historical performance of multiple accounts and portfolios. Therefore, an individual account and a particular trading portfolio may have realized more or less favorable results than the composite indicates. From January 2012 to date, returns shown are actual returns of Melissinos Trading's trading program Eupatrid Commodity Program" as traded in Fund accounts. The returns represent the actual performance of all of the Fund accounts traded as a whole. The performance includes a transition period between November 2011 - December 2011 where no trading took place. Records, which document and support this performance are available upon request. The returns above are net of management fees (paid monthly) and performance fees (paid quarterly net of any new trading profits); fees vary amongst Fund participants. Actual returns of individual Fund participants or private client accounts may deviate from trading program returns depending on trading level, investment timing, & fee differences, among
